### **OUTCOME BASED EDUCATION**

**Outcome-based education** (OBE) is an educational theory that bases each part of an educational system around goals (outcomes). By the end of the educational experience each student should have achieved the goal. There is no specified style of teaching or assessment in OBE; instead classes, opportunities, and assessments should all help students achieve the specified outcomes. There are three educational Outcomes as defined by the National Board of Accreditation:

**Program Educational Objectives:** The Educational objectives of an engineering degree program are the statements that describe the expected achievements of graduate in their career and also in particular what the graduates are expected to perform and achieve during the first few years after graduation.  
[nbaindia.org]

**Program Outcomes:** What the student would demonstrate upon graduation. Graduate attributes are separately listed in Appendix C

**Course Outcome:** The specific outcome/s of each course/subject that is a part of the program curriculum. Each subject/course is expected to have a set of Course Outcomes

## MAPPING OF OUTCOMES

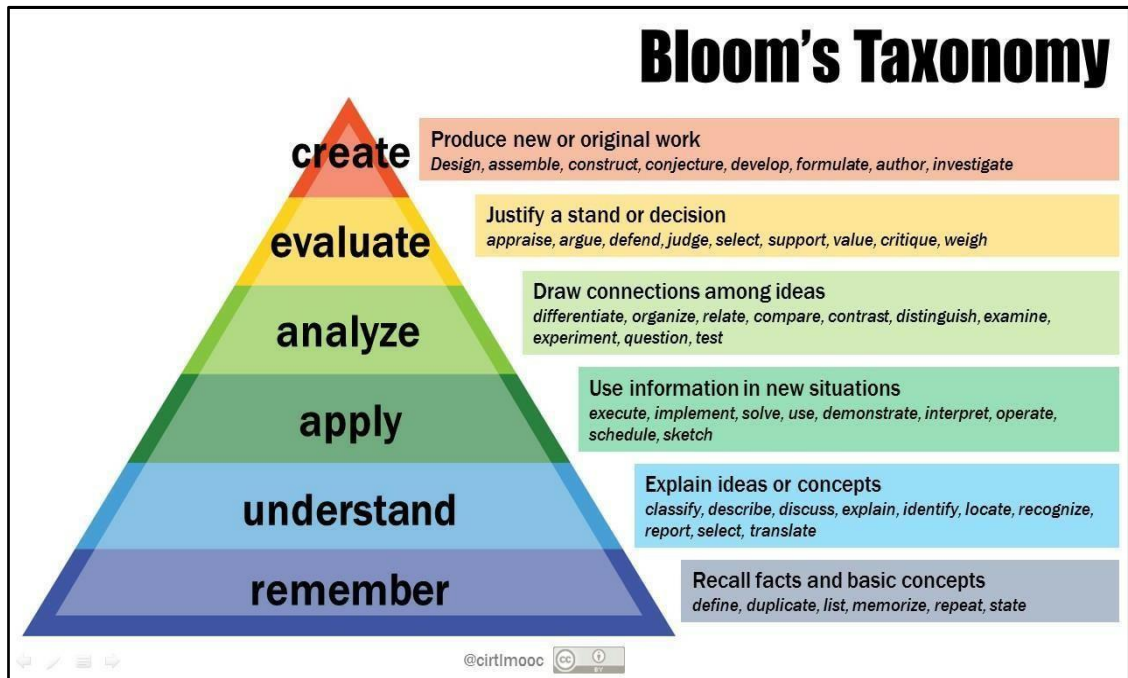

**APPENDIX-C**  
**GRADUATE PARAMETERS**

<b>Management Knowledge:</b> Apply knowledge of management theories and practices to solve business problems for long term business sustainability.
<b>Analytical:</b> Foster analytical and critical thinking abilities for data-based decision making.
<b>Value Based Leadership:</b> Develop value-based leadership in management students.
<b>Ethics:</b> Ability to understand, analyze and communicate global, legal and ethical aspects of business.
<b>Team work:</b> Ability to lead themselves and others in the achievement of organizational goals, contributing effectively to team environment.
<b>Entrepreneurship &amp; Lifelong Learning:</b> Ability to develop entrepreneurship spirit among management graduates with the essence of lifelong learning.

### BLOOM'S TAXONOMY

**Bloom's taxonomy** is a classification system used to define and distinguish different levels of human cognition—i.e., thinking, learning, and understanding. Educators have typically used Bloom's taxonomy to inform or guide the development of assessments (tests and other evaluations of student learning), curriculum (units, lessons, projects, and other learning activities), and instructional methods such as questioning strategies.
